Colorado transportation project shapes highways, careers

One of CH2M HILL's largest Colorado highway projects, the Interstate-25/U.S. 50/State Highway 47 Interchange in Pueblo, began in 1992 with a simple site assessment and feasibility study. It grew into a massive 10-year design and construction undertaking, involving more than 100 employees from at least eight CH2M HILL offices. As the project evolved, so did the skills and career paths of many team members.

Working with the Colorado Department of Transportation, CH2M HILL designed and managed the construction that, upon completion, significantly improved a dangerous, congested interchange. The project, too, provided many employees with leadership and management experience.

A sampling of career paths of several project team members are highlighted below. The employees featured are representative of the many people who made this project a success.
